# Carrom - Multiplayer

Mobile Game

by: BBK Games
email: info@bbk-games.com

Thank you for purchasing the game.

If you have any questions, contact us via e-mail.

Are you going to publish a game for the first time?

Do you find the critical path (game and the setting of the project software)?

If yes ended, we can help you publish the project in your developer account.

If there are features you want to add to the project or changes you want to make, you can contact us by e-mail to talk about the details.

## Import Project Files

Open Unity Hub and press Add button.

Select project folder from the dropp-down.

Choose Unity Version 2021.2.20f1 or higher version. (Recommended version 2021.2.20f1)

Click the project name then hit the open button to open Unity.

## Name, Icon & Package Name

Open Player Settings for change name, icon and package name.

Go to File - Build Settings (CTRL + SHIFT + B) - Player Settings

**Company Name** Change with your published company name.

**Product Name** You can change name name from this section.

**Default Icon** Drag and Drop your icon icon to Assets folder and press Select on icon area. Choose your new icon.

Click to **Other Settings**

You will see **Identification** area.

This package name is automatically generated from your Company Name and Product name.

For change this, enable **Override Default Package Name** and set your package name to Package Name area.

## Splash Screen

Open Player Settings for Splash Screen.

Go to File - Build Settings (CTRL + SHIFT + B) - Player Settings

Click to **Splash Image**

Drag and Drop your Splash Image to Assets folder and press Select on icon area. Choose your new icon.

If you have Unity Pro or Pro license, you can disable Unity logo by unchecc Show Unity Logo checkbox.

## Constants

Open Constants.cs from Assets - Scripts folder.

You can change the game properties from this area.

```
public static int NUM_COINS_LOTTY_PICK = 200;
public static int NUM_HOLES_LOTTY_PICK = 50;
public static int NUM_BOX_OLLOTTY_PICK = 200;

public static bool[] GAME_OPERATIONS_ARRAY = { true, true, true,
